

Ryan Thomas

Orlando, FL 32804 239-595-5555

SUMMARY

Highly skilled and results-driven Software Engineer with over 6 years of experience specializing in developing scalable, efficient, and innovative software solutions. Proficient in multiple programming languages, frameworks, and cloud technologies. Adept at designing and developing clean, maintainable code, debugging, and optimizing software for enterprise-level applications.

PROFESSIONAL EXPERIENCE

Software Engineer Northrop Grumman – Orlando, FL Sep 2023 – Present

Development & design of E-2D Advanced Hawkeye aircraft, PCMS and WRMS software systems

- Deploying, automating, maintaining, implementing and improving software systems and infrastructure
- Reducing query search time of signal data in SQL Server by 4 minutes using consolidation of table joins
- Incorporating Agile framework, using Atlassian tools to coordinate software ticket resolutions
- Designing scalable, readable, object-oriented code in .NET/Core C#, C++ & Java within Red Hat 9 OS
- Programming with REACT to build full-bodied REST APIs for displaying wireless signal data
- Incorporating multi-threading and unit tests within each subsystem to ensure efficiency of software
- Using Qt framework for development of computer displays on aircraft hardware architecture
- Using Git and Bamboo for source control, Jenkins for automated testing of build scripts for microservices
- Incorporating Kafka & RabbitMQ for signal topic partitioning, allowing for organization of messages

Software Engineer Coleman Aerospace - Orlando, FL Feb 2019 – August 2023

Development and distribution of propulsion and power systems for launch vehicles, satellites, missile defense

- Developed specifications and design documentation associated with avionics test equipment software
- Implemented RedHat Linux updates to align with current lab support equipment hardware
- Wrote updates to unclassified/CUI documents to align with hardware/software updates
- Implemented company coding standards for readable and scalable object-oriented C++ code
- Built, compiled and deployed C/C++ simulation code using VxWorks and RedHat Linux OS

WEBSITE

erregeteygo.com

Currently programming project for creating/exporting personal Yu-Gi-Oh deck profiles, and showcasing combos

- Developed multi-service Yu-Gi-Oh! Deck Builder web app using a React frontend and an asynchronous .NET API backend, leveraging modular design to optimize performance & separate domain logic
- Engineered event-driven data pipeline using Azure Event Hubs (Kafka API) to decouple data ingestion from core logic, enabling a real-time background analytics engine to calculate card synergies and game health
- Executed database migration from local MongoDB instance to Azure Cosmos DB vCore cluster, handling security rules and data hydration logic to ensure high availability and data persistence
- Configured and managed secure cloud infrastructure within Azure Container Apps, implementing custom domain routing and using Docker containerization for reliable multi-environment deployments
- Implemented CI/CD pipelines using GitHub Actions to automate build, test, and containerization processes, streamlining deployments directly to Azure Container Registry/Container Apps

EDUCATION

Bachelor of Science - Computer Engineering

Florida State University

TECHNICAL SKILLS

- 🔗 .NET/Core, C#, C++, Java, REACT, Python, SQL Server, Docker, Powershell, Kafka, RabbitMQ, Git, Qt, Linux, XML/JSON, Unreal Engine 5, SpringBoot, Jenkins, Azure, AWS, Javascript, Unity, Visual Studio, TCP/IP
